

Creativity of
Engineering

Wenger® **ORCLANCY**

Wenger and J.R. Clancy have been enhancing performances around the world for decades.

We call it “creative engineering”. It’s our unique ability to develop solutions for performance spaces that enable artists to perform at their best and provide audiences with unforgettable experiences.

We are Wenger | J.R. Clancy.

Acoustic Solutions

Wenger has a long history of leading the market in acoustic solutions, both active and passive, for performing arts venues. Our products are engineered with performance capabilities that enhance and balance sound for every seat in the house. Venue managers also benefit from the flexibility of easily-adaptable set-up.

Enhancing experiences for performers and audiences worldwide

Transcend™ Active Acoustic System

Alter your performance spaces into a multipurpose venue with the Transcend™ Active Acoustic System.

Elevate the experience for both performers and audience by managing the behavior of sound to emulate the acoustics of different types and sizes of spaces. The system also balances sound quality to every seat in the house.

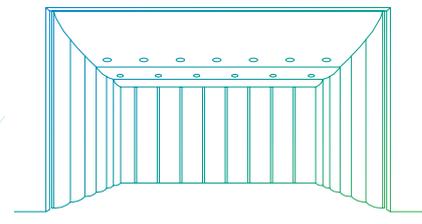

Transcend's precisely calibrated system of microphones, speakers and digital signal processing will dramatically improve your facility's acoustics - from the spoken word to a symphony or theatrical performance. Transcend also requires fewer inputs to achieve amazing results, which translates into an affordable solution.

Diva® Acoustical Shells

Exceptional acoustics, beautiful aesthetics, and engineering expertise all combine to make our showpiece Diva® Acoustical Shell the ideal centerpiece for any performing arts stage. Diva's stunning acoustic capabilities create optimum on-stage sound and excellent sound projection to the audience.

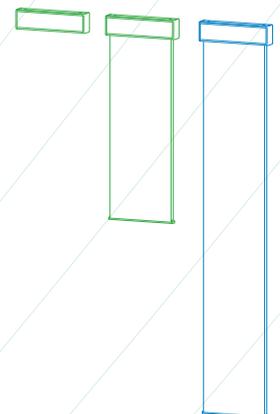

Diva design and aesthetics accommodate everything from historic theatres to the most modern architecture.

Transform™ Acoustical Banners

Transform™ motorized acoustical banners bring the benefits of variable acoustics to most performance spaces.

In only a few seconds, Transform can tailor your acoustics to best suit your next performance by controlling the level of sound absorption in your space. The result is more pleasing acoustics that enhance your audiences' listening experience.

Stage Engineering

J.R. Clancy's complete line of stage engineering solutions has allowed us to incorporate motion into performances for more than 130 years. With rigging options ranging from simple to complex, our products are designed for reliability, safety and flawless performance.

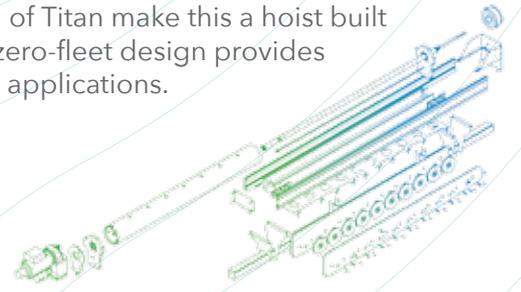

Elevating performances to new heights

Titan® Hoist

Titan® is the high-performance hoist for venues with demanding speed and travel requirements. It is a customizable product with a range of options manufactured to your specification.

The robust design and quiet operation of Titan make this a hoist built for performance as well as safety. The zero-fleet design provides for a compact installation that fits most applications.

- Vertical or horizontal mounting
- Speeds up to 600 fpm | 3.6 m/s
- Loads up to 3,300 lbs | 1,500 kg
- Output-side secondary brake
- Zero fleet
- Dual brakes

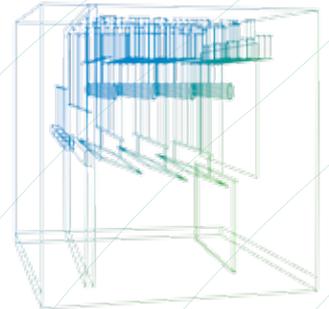

SceneControl® Control Systems

SceneControl® systems provide a complete range of motion control consoles for any performance space - large or small. Each system is configured to order, with the right combination of consoles, E-stops, console plug-in points, position control and drive systems.

SceneControl can be used with all types of automation equipment in your venue. One, or multiple consoles, can be implemented to control the overstage hoists, stage lifts, and other equipment, such as revolves and curtains.

- Unlimited cues
- Unlimited shows
- Single or multiple consoles
- 3D flightpath capabilities
- 3D wireframe graphics
- SIL3 safety options
- Redundant parallel processor option

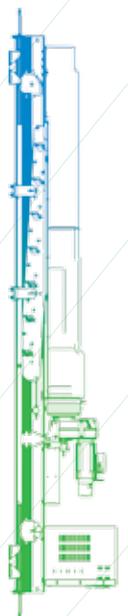

PowerLift® Hoist

PowerLift® is an economical, automated hoisting system available in a range of fixed or variable speeds. Its versatile mounting clip system enables the PowerLift to be installed in virtually any space, including performance venues that lack a conventional grid.

The PowerLift is compact, quiet and provides pinpoint accuracy for your stage productions.

- Dual brakes
- Low noise
- Modular mounting system
- Vertical or horizontal mounting
- Speeds up to 180 fpm | 0.9 m/s
- Travel up to 62 ft | 19 m

Staging & Seating

Wenger staging, risers and platforms are the most trusted in the business. No other designs are so versatile, durable, and easy to set up and strike.

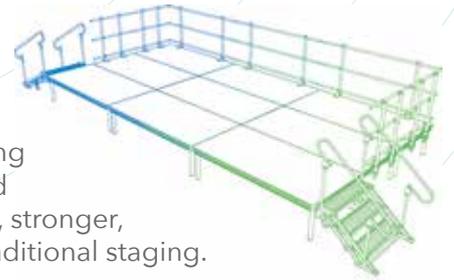

Wenger fixed and portable audience seating gives you a world of high quality choices perfectly suited to your venue and dedicated to your satisfaction.

Maximum strength, flexibility and quality with the aesthetics to compliment any performance venue

StageTek™ Staging

StageTek™ is the next generation of portable staging. The refined, smart design is the result of extensive research, engineering and technical advancements in materials and manufacturing. This staging system is lighter, stronger, easier to handle, and faster to set up than traditional staging.

StageTek's interchangeable components, including decks and legs, provide unlimited configuration possibilities. To meet your space and aesthetic demands, the decks are available in a variety of sizes, shapes and surface options. When it comes to stretching your investment across multiple needs of your venue, like seated risers and performance stages, StageTek is the standard.

Audience Seating

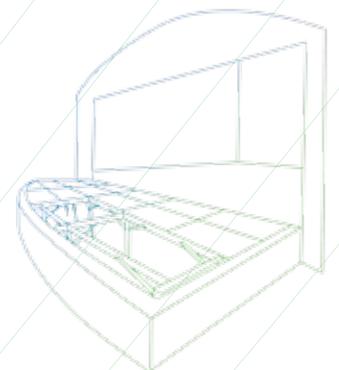

Wenger offers a full range of fixed and portable theatre seating options for any performing arts venue. Our upholstered audience seating is handcrafted and ergonomically designed for quiet comfort.

Choose from a wide variety of premium finishes and high quality fabrics to compliment your performance space. Our comprehensive team works with you from the initial planning stage to final installation.

STRATA® Pit Filler

The durable STRATA® Orchestra Pit Filler is custom-designed to fit the exact specifications of your orchestra pit. STRATA provides incredibly strong support and its innovative column-beam design opens up space underneath for ample storage. This pit filler installs quickly with a small crew and the acoustically dampened decks fit flawlessly to an existing stage to create an integrated surface.

Capabilities

Great venues flourish as every detail works together in harmony. At Wenger and J.R. Clancy we work closely with our customers to ensure total success, and we support projects with custom solutions, project management, installation and impeccable service.

The industry's finest products matched with the greatest support

Custom Solutions

Wenger and J.R. Clancy are industry leaders when it comes to custom capabilities. Our extensive engineering support and experience drives challenging design solutions while working closely with our customers. With two diverse, complimentary facilities, Wenger and J.R. Clancy have the people and the resources to produce custom products to meet your needs.

Our products are designed to match jobsite requirements with customer needs while being mindful of your budget. The Wenger | J.R. Clancy team is dedicated to creating rigging, hoists, staging, seating, acoustics and performance solutions tailor-made for projects around the world.

Project Management

Wenger | J.R. Clancy project managers are committed to oversee project details and ensure on time product delivery. Our project managers are experts at scheduling and site coordination. We provide the experience to help facilitate every aspect of a project, providing the support and expertise required for optimal results.

Installation

The installation service team at Wenger | J.R. Clancy ensures that projects are installed on time and to your satisfaction. Our experienced installers strive to exceed customer expectations while providing exceptional care and a level of understanding that only the product manufacturer can offer.

Service

Our unwavering commitment to industry-leading customer service and support is one of Wenger's greatest traditions. The J.R. Clancy Training, Inspection and Maintenance (TIM™) program helps improve safety and reliability within your performance space. The well-being of your staff, performers and audience is our chief concern and the inspiration behind our TIM™ program. Our goal at Wenger and J.R. Clancy is to exceed customer expectations by supporting superior products with expert technical support.
